

Who We Are

CommissionSoup's performance-based affiliate network helps merchants reach targeted consumers and affiliates better monetize their online traffic. As a leading Cost Per Action (CPA) affiliate network, CommissionSoup cultivates optimal marketing relationships by providing qualified leads with transparent and scalable solutions from the promotion of leading and exclusive offers with great commissions.

CommissionSoup, a division of Bulldog Media Group, Inc., is dedicated to building relationships with our clients to understand their goals and help them achieve success. CommissionSoup is more than a web site. Our clients receive personalized service and support, creating a better online experience.

Since 2001, CommissionSoup has built relationships because of our dedication, but retained them because of our performance. We have always believed in the benefits of transparency and collaboration for the good of the whole. Our QResults system can assist in identifying high-quality, high-performing traffic sources as well as low quality or fraudulent traffic sources. Identifying and working with both of these sources appropriately can increase everyone's online marketing results.

QResults System

QResults was designed in-house as part of our proprietary tracking system and provides details on the location, performance, and conversions of individual traffic sources. With the results from QResults, we can help analyze all traffic sources running through our network.

Key features of QResults include the detailed exposure of where traffic is originating and the ability to analyze a specific time frame, source, or multiple sources - adding to a merchant's control of their offer's promotion. Utilizing our QResults system can have a big impact on the overall performance of the offers in our network.

By entering into a partnership with CommissionSoup you are joining the Bulldog Media Group, Inc. family which allows you to utilize each marketing channel available, ensuring that your marketing endeavors are successful.
